OIL TEST CASES & CABINETS

Oil Test Case N°1

Test Kit to check the water content in fuels and lubricants

- Water-in-Oil Test (analog)
- Two measuring ranges : 0-1 & 0-2 vol.%
- Works with WR SAFE reagent (non hazardous for transport)

Oil Test Case N°1 – Test Kit to check main parameters of your lube oil

The oil test case N°1 consists of an analog WiO test cell to determine the water content of your lubricant and fuel onsite.

With TRIBOMAR products at your side you get the expertise to help yourself controlling the operational conditions of your machinery.

The oil test case N°1 contains one of the most important test devices determining water in oil. This means a reliable indication about the performance of the lubricants and fuels at any time without a professional lab aside. Improved features on testing and handling are providing to the field engineer an easy to use test equipment with repeatable accuracy.

Order No.: 1087
