

SENSORS

WaterSense DKS1T & Drain Valve (Set)

Tribomar has developed a new sensor to detect the presence of water in your fuel or lubricant.

A low cost sensor - easy to install - helps the operator to control the condition of the fluids in your machinery and storage tanks. The advanced version "DKS1T" even provides an automated drain system to release the water which has been collected in the filter or has been settled on the bottom of the storage tank.

The sensor can help to avoid any consequential damages due to not recognized contamination by water in your system.

The new designed sensor determines the presence of water to recognize a contamination of your diesel fuel oil and/or lubricant in time before a major damage at your machinery occurs. The ability to connect the sensor to your alarm system helps the crew to react with the right measures to get control of the situation.

Order No.:

Sensor 1133

Sensor and Drain Valve (Set) 1134

WaterSense DKS1T

- Sensor & drain valve to detect and drain automatically water in your Diesel fuel & lubricants
- Standard installation in filters & storage tanks
- Alarm switch inbuilt

WaterSense DKS1

- Sensor to detect presence of water in your Diesel fuel & lubricants
- Standard installation in filters & storage tanks
- Alarm switch inbuilt

WaterSense DKS1

Sensor features

- Power 12 / 24 Volt
- Size (L x W) 11 cm x 3 cm
- Weight 130 grams

Valve features

- Power 12 Volt
- Size (H x L x W) 5 cm x 5 cm x 3 cm
- Weight 75 grams
